

2008-02-06

## **DYNASAFE has made the first delivery of a bomb chamber with an internal heating device.**

During 2006-2007 Dynasafe AB has developed a new generation of bomb chambers with remote controlled driving unit, with radioactive shielding, a gas treatment and gas cleaning device and also with an internal heating system.

In the end of January 2008 Dynasafe AB performed a successful testing and commissioning of the first unit with internal heating on site in South East Asia.

By using an internal heating system users can effectively incinerate explosives of the most common substances in the bomb chamber. Suspicious objects can be placed inside the chamber and be made harmless through heating. This will allow for a higher degree of safety for all personnel and the general public which is highly appreciated by police forces, bomb squads and other users worldwide.

For Dynasafe AB this new development will result in an even stronger position on the worldwide market for advanced bomb chambers.
