The **GEC** series of chambers is designed for safe storage and transport of known or unknown explosives, toxic materials or a combination of both.

GECs are gas-tight with possibility to sample gases before they are safely released after detonation. The GECs are designed to withstand repetitive detonations up to the maximum amount of explosives specified.

The GECs are available in different standard designs with high explosion containment capacity and light weight. The GES series is available in different sizes and explosives capacities.

Examples of use; Transport of explosive devices by air, land or sea. Safe storage of explosives in terminals or warehouses.
