## **DYNASAFE delivers gas-tight bomb chamber with radiation shielding**

The potential threat of "dirty bombs" has recently been identified as a new type of terrorist threat. So far, no safe and efficient chamber technology has been available for this type of threat.

DYNASAFE has developed a new type of chamber which is both gas-tight and shielded against radioactive radiation such as alfa, beta and gamma radiation. This new bomb chamber has a fully integrated 360 degrees shielding for efficient use and smooth transport.

The new radioactive shielded chamber was tested and delivered to the first customer earlier this year and has now been through a local testing procedure and training for customer personnel.

DYNASAFE has already received several more orders for radioactive shielded chambers.
