

DYNASAFE awarded order from France

Dynasafe AB received its largest order so far by signing a contract with French company Thales Engineering & Consulting S.A. for design, development, fabrication and supply of a detonation chamber that is to be installed and commissioned in France within the framework of the SECOIA program.

The detonation chamber will be used for the destruction on a large scale of non stockpile chemical munitions dating back to World War I. The main equipment will be delivered during 2009 followed by an extensive test program during 2010. Follow up orders are expected for technical support, consumables and spare parts over the period 2011-2016.

The total value of the order will not be disclosed due to both companies secrecy policy. Dynasafe's competence within Protection against the Effects of Explosions and the flexibility to customize products was the winning concept in competition with several other international companies.
