DYNASAFE helps to destruct 6 million mines in Ukraine.

DYNASAFE along with three German companies participates in an EU-financed program with the mission to destruct and destroy 6 million Russian anti-personnel mines type PFM-1 in Ukraine. The complex design of the mines makes them impossible to disarm. Open-pit blasting of the mines will result in devastating environmental damages. The mines must be destructed in a controllable industrial process with purification of the off gases generated through the process. DYNASAFE will deliver the main parts of the destruction plant, destruction kiln and all parts for off gas purification.

The plant will be shipped and commissioned during the winter/spring of 2007. DYNASAFE personnel will be on site though the whole commissioning process. The daily operation of the plant will be carried out by local personnel.
